PROFESSIONAL SUMMARY

Senior iOS Developer with 5+ years shipping production iOS and Android apps. Sole engineer on the 163-screen Objective-C to SwiftUI rewrite of Rakuten Trade's regulated multi-market stock trading platform. Built MediVault AI, an open-source on-device medical Retrieval-Augmented Generation (RAG) system running Qwen 2.5-1.5B at 22 tokens per second on iPhone 14 Pro (faster than human reading speed) with a three-layer medical-advice safety filter. Project Leader for a 6-person M.Sc. capstone team and mentor to 2 junior iOS developers at Beyond Innovations, while completing M.Sc. Software Engineering at UTM (4.00/4.00 GPA).

SKILLS

iOS: Swift, SwiftUI, SwiftData, UIKit, Objective-C, TCA, Combine, Core Data, async/await, MapKit, Vision/VisionKit, Core ML, XCTest

On-device AI/ML: llama.cpp (swift-llama-cpp + Metal), Qwen 2.5, Core ML MiniLM embeddings, swift-transformers, GBNF-constrained typed JSON, Apple Vision OCR, RAG pipelines, vector search (Accelerate vDSP)

Cross-platform & Android: Flutter, Dart, Provider, sqflite, Kotlin, Java, Jetpack Compose, Coroutines + Flow, Room, Retrofit, WorkManager, Glide, Clean Architecture + MVVM

Backend & Web: Python, Django 5, PHP, Laravel, REST APIs, Bootstrap 5, PostgreSQL, SQLite, GRDB

Tools & CI/CD: Xcode Cloud, GitHub Actions, Azure, TestFlight, Play Console, Instruments, Git, Docker

Leadership & Practices: White-label multi-tenant architecture, offline-first data sync, legacy migration (Objective-C to SwiftUI, Java to Kotlin), code review, mentoring, MIL-STD documentation

Languages: English (IELTS 6.5) | Bengali (native) | Hindi (conversational)

PROFESSIONAL EXPERIENCE

Rakuten Trade Sdn Bhd, Senior iOS Developer

May 2026 to Present | Kuala Lumpur, Malaysia

- Sole engineer on the full SwiftUI rewrite of iSPEED.my, Rakuten Trade's multi-market stock trading app on the [App Store](#), migrating 163 screens from a 649-file Objective-C codebase in one month using AI-assisted development.
- Rebuilt the app on The Composable Architecture (TCA) with a locked design-token system, decomposing a 100-property legacy singleton and replacing a closed-source OpenGL chart engine with DGCharts.
- Shipped to production after QA regression sign-off, holding pixel-perfect UI and behavior parity across Malaysian, US, and Hong Kong markets in a regulated stockbroking environment.

Theta Edge Berhad, Software Engineer Intern

Feb 2026 to May 2026 | Kuala Lumpur, Malaysia

- Built the Ummah Mobility Flutter app, an Umrah pilgrimage booking and travel platform live on the [App Store](#) and [Google Play](#), as one of three mobile developers on a 5-person product team.
- Owned mobile features from requirement through to public release, including the Senangpay payment flow: in-app WebView checkout, hosted-page redirect, and booking-state callback.
- Built an offline-first data layer with a SQLite outbox that queued writes while offline and drained them on reconnect.
- Designed and implemented the team's GitHub Actions workflow, auto-deploying the Laravel API to Azure on merge to main.

Beyond Innovations & Technologies Limited, iOS Developer

Apr 2024 to Oct 2025 | Remote

- Mentored 2 junior iOS developers and reviewed 15 to 20 pull requests per week at peak on a 5-person iOS team.
- Built and extended the target-switching and theming layer of a white-label multi-tenant healthcare platform, then migrated legacy UIKit components to SwiftUI across it (Hooray Health and WellCall 360, separate targets in one Xcode project).
- Shipped the provider search feature using REST API integration and MapKit map plotting.
- Integrated Firebase Cloud Messaging for push notifications and Crashlytics for crash reporting; contributed to 5+ App Store releases.

Beyond Innovations & Technologies Limited, Android Developer

Jan 2021 to Apr 2024 | Remote

- Solo-shipped 3 of 4 production Android apps in the multi-tenant com.hoorayhealthcare platform from architecture through Play Store release, including Purity (5K+ downloads, 5-star rating from 487 reviews); contributed to Hooray Health (10K+ downloads, 90% crash-free sessions).
- Owned Play Store publishing across all 4 apps for 3+ years: 30+ production releases, staged rollouts, and Play Console rejection responses spanning data safety, sensitive permissions, and target API level compliance.
- Modernized the Android stack across tenure: Java to Kotlin, XML to Jetpack Compose, LiveData to StateFlow, Groovy DSL to Kotlin DSL Gradle, with Clean Architecture, MVVM, manual DI, and Room persistence.

EDUCATION

Universiti Teknologi Malaysia (UTM), M.Sc. Software Engineering | *Mar 2025 to Dec 2026 (in progress)*

CGPA 4.00/4.00 across both completed semesters. Capstone (Project Leader): TFMS, see Projects.

Bangladesh Army University of Engineering and Technology (BAUET), B.Sc. Computer Science and Engineering | *2016 to Jan 2021*

Thesis: image-classification of paddy-leaf diseases (applied machine learning and computer vision). 2nd Runner-Up at the 2nd Inter-University Project Fair, 2019 (Attendance Management System).

PROJECTS

MediVault AI, privacy-first on-device medical RAG (open-source, MIT) | github.com/Junaed29/MediVault-AI

- On-device medical RAG with no cloud calls, achieving 22 tokens per second on iPhone 14 Pro.
- Pipeline: Apple Vision OCR, Core ML MiniLM embeddings, vDSP cosine similarity over GRDB SQLite, then Qwen 2.5-1.5B Q4_K_M via llama.cpp with the Metal backend.
- Migrated from Phi-4-mini to Qwen 2.5 for medical-terminology accuracy and reliable structured-JSON output.

TFMS, Task Force Management System, M.Sc. capstone | github.com/Junaed29/TFMS-CodeForce

- Project Leader of a 6-person team (CodeForce) building a Django 5 and Bootstrap web platform that replaces a manual spreadsheet workflow for academic task force assignment.
- Role-based access control across 5 user personas, configurable workload-fairness engine, multi-step approval workflow with full audit logging, and PDF/Excel reporting via reportlab and openpyxl.
- Authored the full MIL-STD document set (URS, SDP, SRS, SDD, STD, STR).

DailyTrack, gamified productivity app | live on [App Store](#), Xcode Cloud CI/CD, 2025

- Custom SwiftUI heatmap and GitHub-style streak chart via Swift Charts, Today Dashboard with weekly and monthly analytics, zero third-party dependencies.

LinkBay, privacy-first link manager | live on [App Store](#), Xcode Cloud CI/CD, 2025

- Hand-rolled Open Graph extraction (5 to 10x faster than LinkPresentation), CloudKit-backed SwiftData store with an actor-isolated repository, share extension for Safari, YouTube, and X.
